LGBTQ POPULATIONS, SELF-IMAGE AND HIV RISK

DISCRIMINATION →

INTERNALIZED HOMOPHOBIA →

RED/GREEN=HIV TESTING EVERY 6 MONTHS BOOLEAN
CIRCLE STROKE=PREP AWARENESS BOOLEAN
Employing a new social psychology study of LGBTQ populations by Rutgers University Professor Corina Lelutiu-Weinberger, this digital visualization will explore the relationship between respondents' self worth and HIV risk. The visualization will employ a scatter plot approach to represent four variables: predictors discrimination and internalized homophobia, and Booleans HIV testing and PrEP awareness.
